PROTECTIVE SOLUTIONS for SEVERE WEATHER CONDITIONS

Hurricanes and tornadoes are highly destructive forces of nature and leave a trail of damage and devastation in their wake. Today's building designs require modern solutions to fortify building safety and mitigate the impacts of these environmental conditions.

U.S. Bullet Proofing is your premiere source for high security, storm impact aluminum windows and doors. Our products are engineered, built, and certified to withstand the damage created by violent storms, including tornadoes and hurricanes. This means you can be certain your property will be protected even during the most severe weather conditions.

FEMA PRODUCT TESTING

USBP's storm impact windows and doors are certified by Intertek to ICC-500 and FEMA 361 standards. Products must go through rigorous testing including pressure testing and high wind impacts to ensure they can withstand and protect from the most violent storms with wind speeds of up to 250 mph. This ensures that our product is tested to the highest industry standards and will allow your project to be eligible for FEMA grant funding.

USBP'S STORM IMPACT WINDOWS AND DOORS

USBP's USAD 1000 FEMA doors and USAW 650 FEMA windows are the perfect combination to provide complete protection for your building. Our solutions offer a FEMA tested system with the highest ballistic rated system available in the market to protect from high power rifles.

PRODUCT SPECIFICATIONS

Storm Impact and Ballistic System Testing

- *Storm Impact:* Intertek listed to ICC 500 (2023) and FEMA 361 (2024)
 - Design Tornado Pressure: +248 / -312 psf
 - Design Hurricane Pressure: +167 / -223
 - Impact Rating: 15lb @ 100mph
- *Ballistics:* UL 752 Level 5 (11th Edition) and UL 752 UL-RF-B (12th Edition) which protects from a 7.62 x 51mm NATO full metal jacket round

USAW 650 FEMA Window Specification

- *Applications:* Fixed, ribbon and punched openings
- *Window Frame Size:* 2-1/2" x 6-1/2"
- *Finish:* Clear and dark bronze anodized finish or custom fluopolymer paint available
- *Glazing:* 2-1/4" Insulated glazing tested to provide missile impact and ballistic resistance in a single unit, with Solarban 90 low-e coating and filled with Argon gas to maximize energy efficiency
- Features a thermally broken frame that reduces heat transfer and improves energy efficiency
- Tested for air infiltration / exfiltration, water pressure, and thermal performance to meet today's architectural design requirements

USAD 1000 FEMA Door Specifications

- *Type:* Single lead, outswing, glazed door assembly
- *Assembly size:* Minimum: 31" x 79-3/4", Maximum: 41" x 87"
- *Frame Size:* 3"W x 5"D
- *Glazing:* 1-3/4" clear glazing tested to provide missile-impact and ballistic resistance in a single unit

SUPERIOR THERMAL PERFORMANCE

USBP's FEMA tested USAW 650 window system include a thermally broken frame and insulated glazing to deliver the best-in-class thermal performance.

SUSTAINABILITY

Balancing Security + Protection + Aesthetics and Sustainability

USBP's line of high security storm impact windows and doors balance all the needs of today's building requirements. Our solutions can provide simultaneous protection from ballistics, blast, storm impact and forced entry, to ensure buildings are able to fully protect people and property from threats of all forms.

The system incorporates an aluminum frame system that is lightweight, non-corrosive and more durable design that also includes a 1" thermal break to satisfy today's energy conservation design requirements.
